

LARSON ANGUS RANCH

20th ANNUAL PRODUCTION SALE

Thursday, March 7, 2024

Leoti, KS - Noon MST, 1 PM CST

NEW SALE LOCATION

LarsonAngusRanch.com - 785.821.1580 - 785.821.1098

Larson
Angus
Ranch

Dear Valued Customer,

Welcome to our 20th Annual "Carcass without Compromise" Bull Sale. We appreciate your interest in our program and look forward to providing you top-end genetics. This is the deepest set of bulls we've offered to date. Each Angus and Charolais bull in the sale has been measured for performance, carcass ultra-sounded, and genomically tested to increase accuracy for your confidence in purchasing the right animal for your operation.

We have a new location and time this year. A map is located on the back cover of the catalog or you can search Larson Ranch on google maps.

We're fortunate enough to have EPD's as a selection tool, but common sense cowmanship is something that's highly necessary for true genetic progress. In 2010, Brady learned how to put in embryos which allowed us to be very aggressive in our ET program. We were no longer limited to just one or two days the embryologist could be here. This has allowed us to filter the genetics that we don't want to replicate and instead, make those animals embryo recipients. If we see a bad udder, a disposition problem, poor foot quality, etc. that cow gets an embryo instead of a straw of semen. Most of these cows are registered, but we only want to produce the best of our cowherd. We live in a harsh environment that's unique to other places in the country. We can get to 110 degrees or higher in the summer months and -25 degrees or below in the winter months. We've got a lot of wind, no trees for shade, and we're just high enough elevation that we've experienced altitude disease (PAP) in the feedyard. Every trait is of economic importance and when we select donors, sires and do planned matings, we try our best to select the cattle that do the most things right.

We will be retaining 1/3 semen interest in all bulls. We reserve no possession rights. This means if we decide we would like to come back and A.I. to a bull that you purchased in the sale, we have the ability to do so at our expense and your convenience.

We have had cattle buyers reach out to us about buying customer calves. If you need any help in marketing your calves, we would love to provide some assistance.

We thank you for your support and interest in our program, and hope to see you at the sale!

LARSON ANGUS RANCH

20th Annual PRODUCTION SALE

Thursday - **MARCH 7, 2024** - Noon MST, 1PM CST

At Larson Ranch - 13 miles north of Selkirk

Auctioneer:

Sonny Booth
(918) 533-5587

Livestock Publication Representatives:

Brett Sayre, Kansas Stockman.....(573) 881-1876
Jeff Mafi, Angus Journal.....(816) 344-4266
Justin Stout, Stock Exchange.....(913) 645-5136

Buyers unable to attend the sale may send their bids to the Regional Manager, Field Representatives or Auctioneer.

Transportation:

Airstrips for small planes are available in surrounding towns close to the ranch. Contact Becky Larson for more information. We will arrange for pick-up service from the small airports in our area if notified before.

Directions To The Sale:

13 miles north of Selkirk (see map on back cover)

Sale Day Phones:

Brady's cell: (785) 821-1580
Dan's cell: (785) 821-1098
Kyla's cell: (620) 353-8170
Beau's cell: (785) 821-4332
Becky's cell: (785) 821-0356

Volume Discounts:

Offered starting at 3 bulls per buyer number - 3% and increasing 1% for each additional bull up to 10 bulls with 10% maximum discount.

Inspection Of The Cattle:

Cattle may be seen at the ranch any time before the sale.

Vet Work & Ultrasound:

Paul Ritter, DVM (785) 672-2500
Monument Station Ultrasound

Herd Health:

All bulls will be fertility tested. The bulls in the sale have been pre-weaned and weaning vaccinated for respiratory disease. They have been poured, dewormed and ear notch tested for BVD.

Terms & Conditions:

All cattle will sell under the terms and conditions of their respective breed associations.

Guarantee:

All bulls selling for \$3,000 or more are guaranteed against breeding injury for the first breeding season. Breeding season is defined as the 90-day period following the first turnout of the bulls. If a replacement bull is available, he will be provided, or if the buyer prefers, credit toward one bull will be given in the following year's sale, less salvage value of the injured bull.

Food & Refreshments:

Coffee and cinnamon rolls in the morning
Complimentary lunch will be served at 11:30 a.m.

This sale will be broadcasted live on DVAuction.

NEW SALE FACILITY

What's the difference between LAR and LR? Great question! In 2020 Brady and Kyla had the rare and blessed opportunity to purchase the neighboring Woodbury Ranch in Wichita County. With aspirations of selling Charolais bulls alongside their Angus bulls, they chose a ranch name with a very similar logo to maintain brand familiarity. In 2022, they started the process of building a facility to host the production sale, manage the cows, and frankly, the kids. We all still work together to provide you the bulls you need and have come to expect. The prefix is simply a difference in ownership.

New Sale Facility
1450 N County Road 3
Leoti, KS 67861

DVAuction

www.dvauction.com

Watch & Bid online for FREE!

Visit www.dvauction.com and Register!

It's easy as 1,2,3...

1. Create an account at www.dvauction.com under the "create new account" tab
2. Apply for bidding by clicking "apply for bidding" in the upper left corner of your screen, at least 24 hours prior to the auction
3. Tune into the sale and make your purchase!

DEDICATED. COMMITTED.

WHOLE HERD REPORTING WITH MATERNALPLUS

Raising quality Angus cattle takes **COMMITMENT**. We take that seriously, which is why we are **DEDICATED** to not only improve our genetics, but also prepare for the future of the Angus breed. We believe that commitment starts with MaternalPlus. Contact AGI at 816-383-5100 or agi@angus.org for more information.

ANGUS
THE BUSINESS BREED

MATERNAL FUNCTION AND CARCASS MERIT.
THE PERFECT PAIR.

Marbling is the No. 1 reason cattle don't make the *Certified Angus Beef*® brand.
Achieve top maternal performance in tandem with improved carcass traits.

CABcattle.com

THE BLOCK

Expected Progeny Difference (EPD):

EPD's have by far the most data points recorded in the system. DNA profiles and actual performance are great indicators of an animal's EPD's, but only indicators. We strongly encourage buyers to look at EPD's. Everything else is an indicator.

Calving Ease Star Designation:

- ★★★★ Heifer bull with excellent calving ease
- ★★★ Heifers and cows
- ★★ Best suited for young and mature cows
- ★ Best suited for mature cows

Blue Boxes:

Indicate top 35% with the exception for the Milk, MW, and MH. These 3 traits are blue for the middle 80% of the breed to eliminate extremes.

AngusGS is a DNA profile that ranks an animal based on the 993,782 animals that have had a DNA profile by 5/28/2021. Ranked on a 1-100 Scale with 1 being the most often favorable. This profile does not rank the entire breed, only the animals that have been tested for a profile. It is a great tool to get the most accurate EPD profile possible.

Actual Performance:

How an animal actually performs from birth weight, weaning weight, yearling weight, ADG, stature, scrotal circumference, and carcass ultrasound is an indicator of EPD's. However, it can be very environmentally influenced. Especially on embryo transfer calves because it is not the animal's actual mother giving birth or raising the calf.

Home Town x Huckleberry is a phenomenal mating in every aspect. They complement each other so well on nearly every single trait. Get the best of both bulls in Lot 1!

We've got 6 sons here in a row of Sunbeam x v2170. If you've ever had an issue of heart failure in the feed yard, these bulls are the way to go. Tremendous PAP projections out of all the v2170 progeny.

HALLEE

Another big time performance bull here and it's not surprising. 2131 has a nursing ratio of 7 calves @ 111. She'd have more, but after she produced Man In Black we thought it'd be wise to pull her out of production and flush her.

Whoa! A 2.31 marbling EPD? To give you an idea how high that is, top 1% is 1.67. If you bred this bull to an animal in the bottom 10% of the breed for marbling, it's calf could potentially be in the top 10% of the breed for marbling. That's bonkers.

It's estimated that 85% of calves have a terminal destiny. If you're retaining ownership and selling on a grid to garner all the premiums available, you'd be hard pressed to find a bull that would do it better than this guy. Performance, PAP, and carcass merit!

This bull checks a lot of boxes. Moderate frame size, calving ease, great PAP, and you'll like him in person too. The dam is a really nice cow.

DAM OF LOT 96

This is an exciting bull we bought as an embryo package hoping for a heifer calf. As you can see, the plan didn't go accordingly. Our loss is your gain. Female making machine here! 22.2 HP EPD with insane growth, calving ease, etc. \$100 M on this bull.

Prodigy is a bull we found from Sitz Angus and Alta Genetics that had a nice blend of cow making ability, heifer pregnancy projections, and calving ease. We should have plugged him in more because these cattle are good.

Two flush brothers out of a phenomenal Fortress cow we purchased from the Marshall dispersal. The dam is also the grandam of Lots 2 and 3 in the sale. This late and we can still find bulls like this one!

MINIATURE DONKEYS

Kyla's mom, Lana, purchased these donkeys in a cattle dispersal a while back. Lana really enjoys the donkeys but with farming, helping Brady and Kyla with the cattle, and grandkids between Kansas and Atlanta, GA, she decided to sell them. The donkeys have been vaccinated, feet trimmed, and well cared for. The sale proceeds of the donkeys is going to her grandkids college fund. If you have questions, feel free to ask Lana 620.353.9178 or Kyla.

Why Not

Use a Registered Charolais Bull?

If your goal, as a beef producer, is to market a calf with wide market acceptance, why not use a registered Charolais bull? In a recent analysis of seven years of extensive Superior Livestock video auction marketing data including more than two million head of cattle, Charolais-sired steer calves outsold all other English-Continental breed cross steers by \$3.73 per hundred weight.¹

Use genetic verification through CharAdvantage to earn more premiums.

Why?

- Market demand
- Predictability
- Increased weaning & yearling weights
- Easy calving
- More live calves
- Adaptability
- Value of Charolais-cross females

AMERICAN-INTERNATIONAL CHAROLAIS ASSOCIATION

¹Esther Dorice McCabe. 2018. Kansas State University. Dept. of Animal Sciences and Industry, College of Agriculture. "Breed trends and effect of breed on sale price of lots of beef calves marketed via video auction".

THE CHAROLAIS BLOCK

Expected Progeny Difference (EPD):

EPD's have by far the most data points recorded in the system. DNA profiles and actual performance are great indicators of an animal's EPD's, but only indicators. We strongly encourage buyers to look at EPD's. Everything else is an indicator.

Terminal Sire Index (TSI):

The AICA Terminal Sire Index (TSI) is a formal method of combining Expected Progeny Differences (EPD) - BWT, WWT, YWT, REA, HCW, MARB and FAT - into one single value on which to base selection decisions. The TSI uses estimates of the genetic relationships between traits with an economic default value based on three year rolling USDA data. The TSI represents a dollar index per terminal progeny produced for a bull in the AICA database, ranking them for profit potential. This dollar index is to be interpreted much like single trait EPD. For example, if Sire A's index is \$191.66 and Sire B's index is \$200.00, then we would expect Sire B's offspring to average \$8.34 more net return (\$200.00 minus \$191.66) than Sire A's offspring.

Larson Angus Ranch continually strives to create better seed-stock for the commercial cattleman by keeping only the top 1/3 of the calf crop for bulls or replacement heifers. The remainder of the crop we feed out ourselves as "calf feds". Though we do have a few mixed loads with customer cattle, we always have several loads of exclusively home raised calves that we acquire carcass data on to further the accuracy of our herd sires and A.I. sires.

LAR Man In Black was the \$77,000 top seller in the 2021 production sale to ABS Global. This is the first sampling of his progeny at LAR and next year we will have a lot more! Man In Black has been in elite company since the beginning, and breeders from across the country have plugged him in. His power, substance, and dimension speak for themselves. Coupled with his incredible foot quality, performance, and carcass merit we believe he will make a lasting legacy on the Angus breed and cattle industry as a whole.

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted whether the animal has a genotype and the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is more favorable.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

MANAGEMENT

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Claw Set (Claw), is expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes.

Foot Angle (Angle), is expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees

at the pastern and appropriate toe length and heel depth.

Pulmonary arterial pressure EPD (PAP), is expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

SVALUE INDEXES

SValue Indexes, reported in dollars per head, are multi-trait economic selection indexes where a higher values suggest more profit when comparing two individuals.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with current production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning.

Cow Energy Value (\$EN), is expressed in dollar savings per cow each year due to lower cow maintenance energy requirements (due to lactation and body size) with a larger number being more favorable.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle and sell on a carcass weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), an index, expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

American Angus Association \$Value Indexes

Dollar value indexes, or \$Values, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

ANGUS
THE BUSINESS BREED

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase pre-weaning growth through additional weaning weight and maternal milk with expenses adjustment for mature size and maternal milk.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.
